

Check out our new sports ticker and add up to the minute local and national sports scores to your website. Here's how you can do it along with a brief description of its features.

First get a site username and password if you don't already have one (it's FREE). Once you are signed in click the ticker tab on the left hand side of the page. That will send you to your custom ticker control panel.

The control panel is where you will get your custom html code as well as a tab to add the sports and games you'd like and the ability to create sports and teams that aren't available in our database.

The ticker also will create a PLAY! link to our 25 game prediction match up for all teams that are in our database. This will give visitors to your site another option when viewing the ticker. (The prediction option can also be disabled if you'd just like a classic ticker with scores only).

Users can control the speed, select the start date/end date plus adjust the text size and colors of the sport and teams for each game created.

Check it out, create your own ticker and let me know what you think or if you have any problems.
